

WORDPRESS PLUGIN GUIDE

Accept Sauki Pay payments on your WordPress website.

Use Sauki Pay at WooCommerce checkout or add a modern standalone payment form to any page with a shortcode.

What This Plugin Does

Sauki Pay helps you accept payments on your WordPress website. The plugin connects securely to the Sauki Pay API and redirects customers to Sauki Pay checkout to complete payment.

- Add Sauki Pay to WooCommerce checkout.
- Add a standalone Sauki Pay payment form to any page.

Requirements

- WordPress 5.8 or newer.
- PHP 7.4 or newer.
- Sauki Pay merchant public and secret keys.
- WooCommerce, only if you want WooCommerce checkout payments.

Download The Plugin

You can download the Sauki Pay WordPress plugin from the official GitHub release page.

Open the Sauki Pay WordPress plugin release page

Download the plugin ZIP directly

Download the ZIP file before installing the plugin in WordPress.

Install The Plugin

- 1 Log in to your WordPress admin dashboard.
- 2 Go to Plugins > Add New > Upload Plugin.
- 3 Upload the Sauki Pay plugin ZIP file.
- 4 Click Install Now.
- 5 Click Activate Plugin.

Configure Sauki Pay

- 1 Open Sauki Pay from the WordPress admin menu.
- 2 Enable the plugin.
- 3 Choose test mode or live mode.
- 4 Enter your Sauki Pay public and secret keys.
- 5 Confirm the API base URL and save your settings.

Use test mode while setting up and switch to live mode only when you are ready to accept real payments.

Callback And Webhook URLs

The settings page displays the URLs your website uses for payment confirmation. Copy the webhook URL from the settings page and add it to your Sauki Pay dashboard.

If you are testing locally, your WordPress site must be reachable from the internet. A public staging website is recommended.

WooCommerce Payments

- 1 Install and activate WooCommerce.
- 2 Open WooCommerce > Settings > Payments.
- 3 Enable Sauki Pay.
- 4 Set the checkout title and description.
- 5 Save changes.

When a customer pays through WooCommerce, the plugin creates a payment reference, sends the order details to Sauki Pay, redirects the customer to checkout, verifies the payment, and updates the order.

Payment Form Shortcode

Open Sauki Pay > Payment Form in WordPress admin to create or edit the form. The page generates a shortcode for you.

```
[saukipay_payment_form]
```

```
[saukipay_payment_form amount="5000" currency="NGN" title="Pay Registration Fee"
fixed_amount="yes"]
```

Payment Form Options

Option	Description
Form title	The heading shown above the form fields.
Amount	The amount customers should pay.
Currency	The payment currency, for example <code>NGN</code> .
Button text	The text shown on the payment button.
Fixed amount	Prevents customers from changing the amount.

Customer Payment Flow

- 1 Customer enters their name, email, phone number, and amount.
- 2 Customer clicks the Sauki Pay button.
- 3 The customer is redirected to Sauki Pay checkout.
- 4 After payment, Sauki Pay redirects the customer back to your website.
- 5 The plugin verifies the payment and shows a success or failure message.

Webhook Confirmation

Sauki Pay can send webhook events to your website after payment. The plugin verifies webhook requests before processing them.

When a webhook is valid and handled successfully, your website returns `ok`.

Going Live

- 1 Confirm your live public key and live secret key are saved.
- 2 Turn off test mode.
- 3 Confirm your webhook URL is saved in your Sauki Pay dashboard.
- 4 Run a small live payment to confirm everything works.

Support

If you need help with your Sauki Pay account or API keys, contact Sauki Pay support.
